Biopteren en kweken afnemen

Karin Timm – van Ruitenburg
verpleegkundig specialist intensieve zorg,
dermatologie

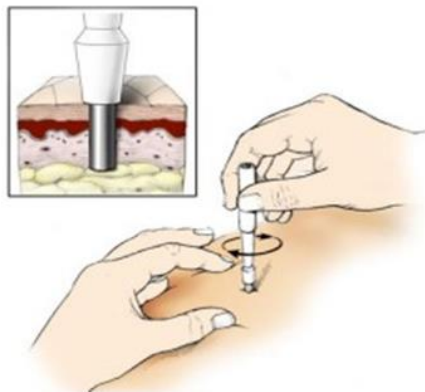

IJsselland Ziekenhuis,
Capelle aan den IJssel

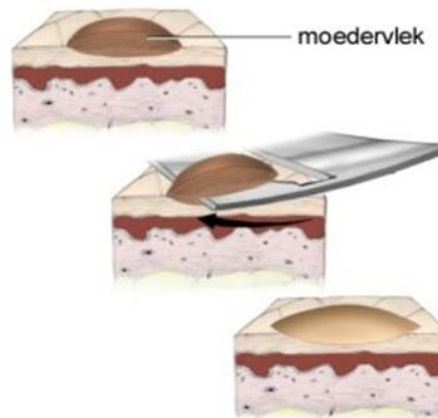

Vier varianten van de biopsie

- 1. shave-biopsie
- 2. stansbiopsie zonder hechten
- 3. stansbiopsie met hechten
- 4. excisiebiopsie

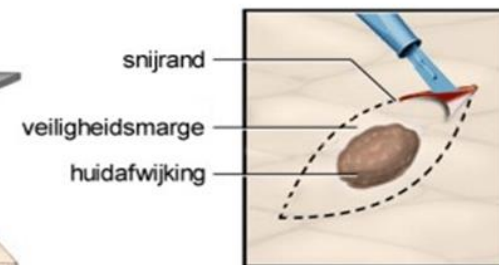

punch biopt

shave biopt

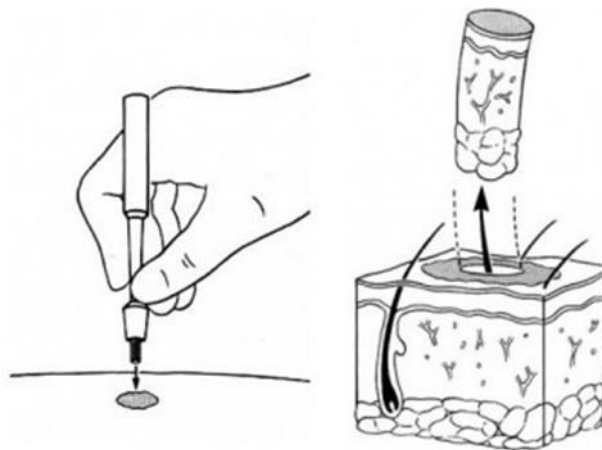

excisie biopt

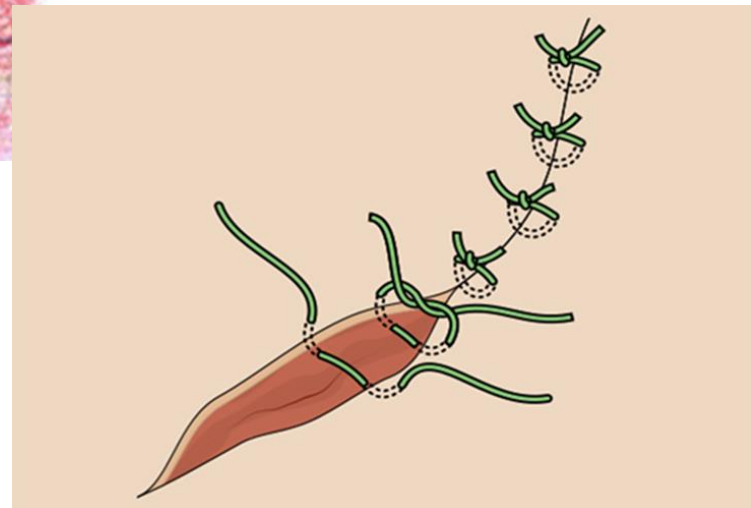

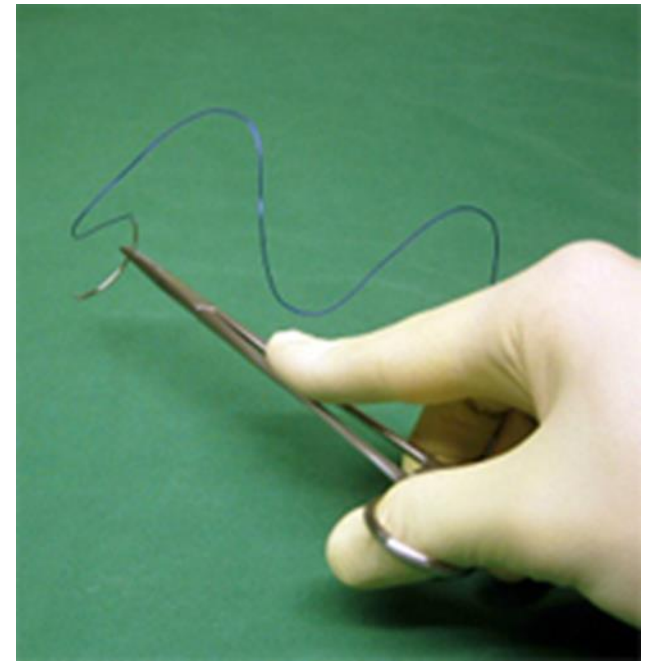

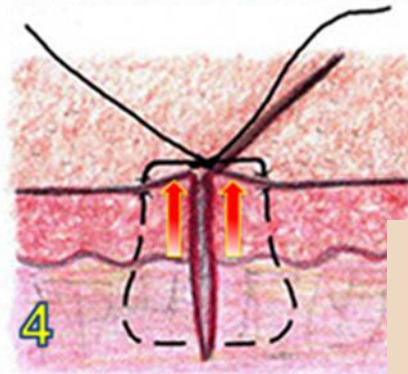

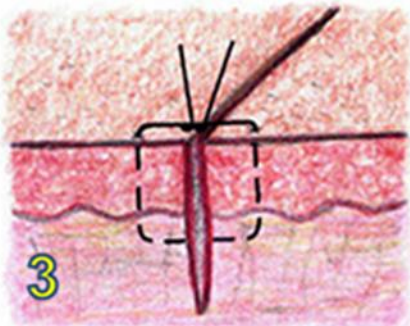

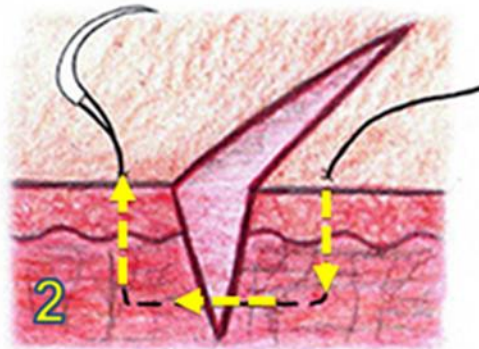

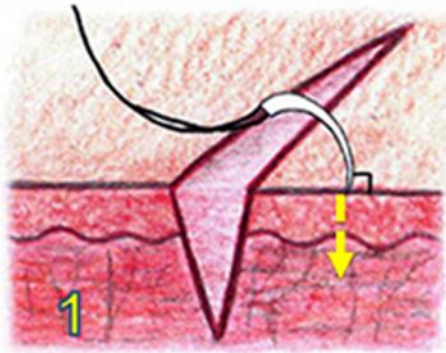

Afnemen punch/stans biopt

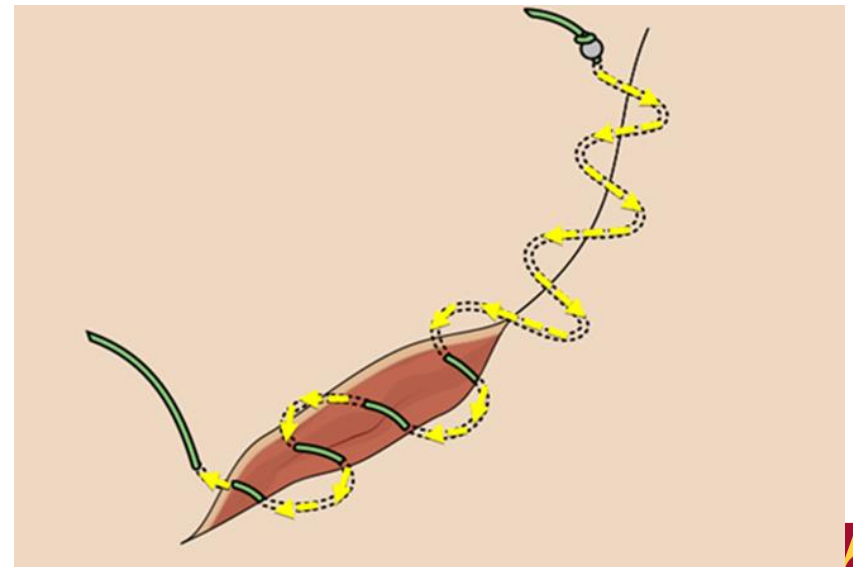

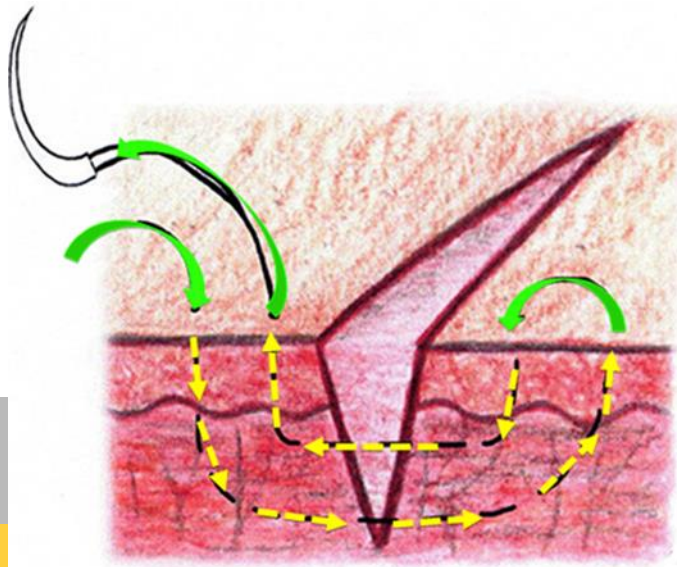

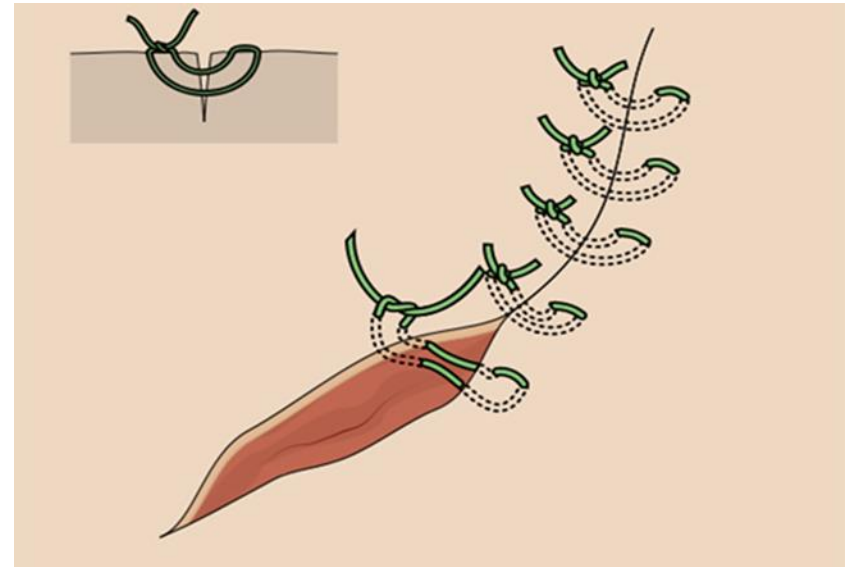

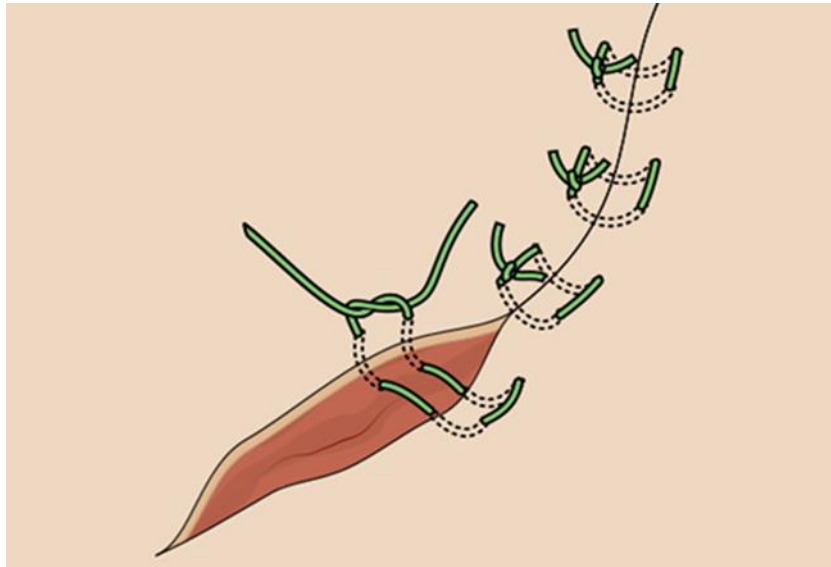

- Xylocaïne (lidocaïne) 2% met adrenaline 1:80.000
- Onder laesie of field-block
- Hechten vs niet hechten
- Representatieve plaats:
 - annulaire lesies uit de actieve rand zone
 - HE-biopt (kleuring) uit de rand van de blaar of naast de blaar

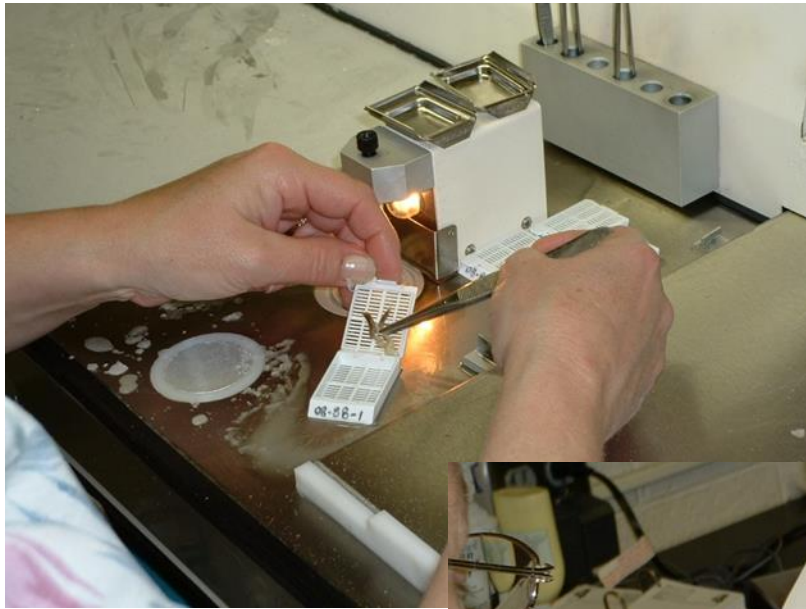

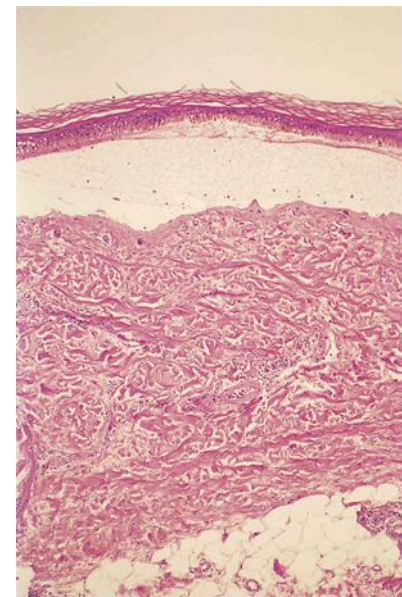

Hechten

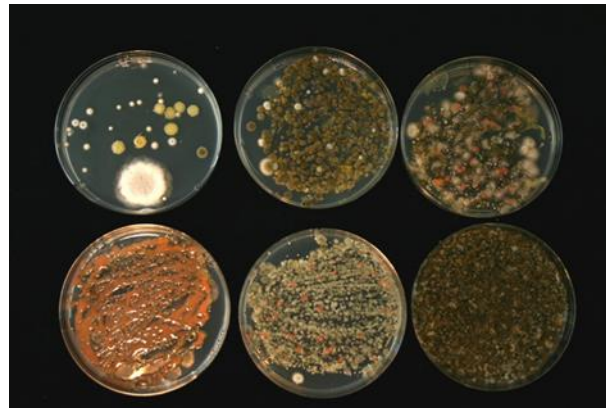

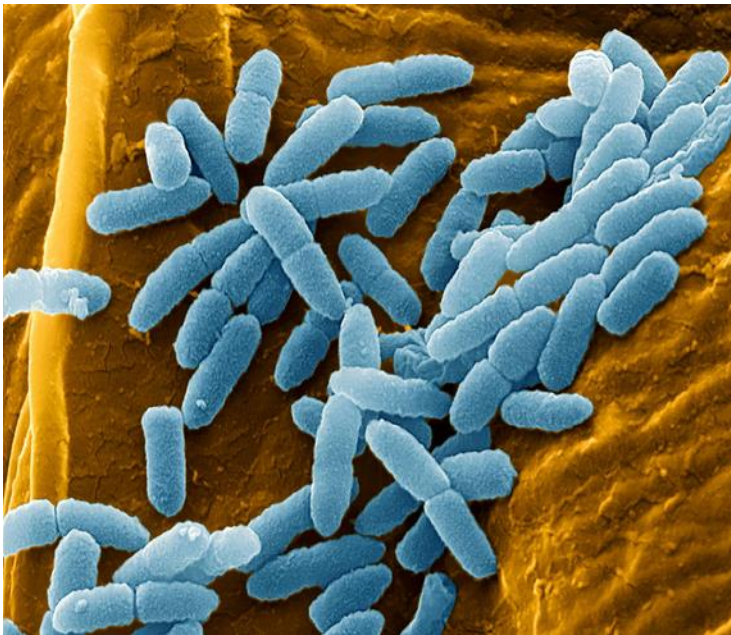

© 2007 Elsevier Inc.

Kweken afnemen

- Gouden standaard: diepe kweek
 - Duur en invasief
- Levine techniek vs Z-techniek
 - Levine: druk op 1cm²
- **En natuurlijk: eerst wond reinigen!**

Meest gevonden organismen:
enterococcus, Staphylococcus aureus,
Pseudomonas aeruginosa

Have fun!
